

## Resource 1.10

### Biodiversity

All schools are part of an ecosystem, many of which have been modified by people. The amount and quality of biodiversity may differ from school to school and place to place, however all schools have the opportunity to take practical action to improve the quality of biodiversity, whether it is within or outside the school grounds.

Survey the biodiversity at the school or in a nearby area.

Location	Issue	Action	Responsibility	Priority

Set your school some **goals**.

Your goal might be to: Increase the diversity of plants and other animals and organisms.

Think about how this could be achieved?

You might consider:

- Local indigenous gardens
- Shade house and propagation facilities.
